

CPD Seminar

Subsidence Stabilisation, Helical Micro-piling and Structural Repair Techniques

This CPD seminar aims to educate the specifier in the methods of stabilising structures that have suffered damage caused by ground movement, specifically by using innovative Helifix masonry repair and strengthening methods in conjunction with proven helical micro-piling techniques.

During a one hour seminar we also address the benefits of non-disruptive lightweight piling and super-structure reinforcement with regard to cost effectiveness, aesthetic impact, project timescales and design implications.

Seminar Programme

- How can we help?
- Development of the Helical Micro-pile
- Installation Methods
- Combining Helical Micro-piles and Helibeam
- Case Studies
- Summary
