

CPD Seminar

Structural Anchoring and Stabilisation Techniques Using The Helifix SockFix System

This CPD seminar aims to educate the specifier in the common causes of masonry failure and how such structural faults can be repaired and strengthened, specifically by using Helifix SockFix anchoring and stabilisation techniques.

During a one hour seminar we will look specifically at the SockFix system and the benefits in relation to masonry repair and structural stabilisation. There is a Q&A session and certificates will be issued on completion.

Seminar Programme

- Common Masonry Defects
- An Introduction to Sock Anchor Systems
- Product Principles
- Design Specification and Guidance
- Case Studies
- Summary
